

Waterproofing Systems and Technical Solutions

Chilevision Macha's Project

Chilevisión Machasa's project complies with an essential television industry requirement, free space. It consists in a group of buildings including a 7 meters high indoor industrial space with a 8 x 8 meters pillars matrix sustaining a continuous concrete slab. The project also has a three levels offices building and another narrow building through out the south access.

Chilevisión Machasa's concrete structure is well finished thank to PAREX Chile concrete repair mortars. The project also involved hardening the indoor industrial space with technical PAREX Chile products.
