> El Paso's Hydroelectric Central

El Paso's hydroelectric central aims to harness the river de Las Damas hydroelectric potential. As a result, the project helped to reduce the previous 6% energetic deficit of the regional grid. Moreover, this central was part of the sustainable environmental national policy and was presented within the Kyoto Protocol's Clean Development Mechanism.

PAREX Chile supplied grouting mortar for fixing the tunnel anchors, contributing to the construction of one of the hydroelectric plant key areas.

APPLIED PRODUCT

- LANKO FLOW 903 FOR HIGH STRENGTH GROUTING AND FIXING OF TUNNEL ANCHORS
