

Waterproofing Systems and Technical Solutions

Graslin Course

Enlightened during nighttime, animated by a fountain during daytime, open to the Cambronne Course, with a magnificent theatre in its center, the Graslin Course is now one of Nantes' highlights.

Designed by the urbanist-architect, Yves Steff, the Graslin Course is now a magnificent walkway.

The LANKOSTONE PAVING SYSTEM was used for its fast setting properties, high performances to withstand turning traffic, and its esthetical appearance as used in a historical area of Nantes.

Two silos were dispatched in job site to fasten mortars' mixing and enhance productivity.
