Deptford Market Yard

The re-development of a London market yard incorporating a series of refurbished railway arches for commercial and leisure use features a vibrant paving scheme using high strength bedding, bonding and jointing materials from Parex. The development is part of a major £50 million public private scheme carried out by the London Borough of Lewisham. The regeneration scheme also incorporates The Tinderbox House and Station House, a colourful eight storey apartment complex as well as a restored carriage ramp reputed to be the oldest railway structure in London.

The new public piazza and market place is at the centre of a vibrant market scene which extends into surrounding streets. Part of the space is also used for outdoor performances. The market yard area features a paving scheme covering approximately 1,250 sq metres based on natural granite setts in a number of vibrant colours including Crystal Black, Kobra, Heather Green, Royal White, Pink Pearl, Magma.

To bed the units paving sub-contractor Charles Edward Ltd, of Larkfield, Kent, used PAREX FBC – fine bedding. Following initial bonding, the nominal 8-10mm gaps between the setts were jointed using environmentally-friendly Parex Granatech ECO which was slurry applied, with the paved surface cleaned using mechanical belt cleaners following the initial material set.

APPLIED PRODUCTS

- GRANATECH 40 NATURAL

ALSO

- FBC
- BOND PLUS MORTAR

TECHNICAL DETAILS

- 1,250 sq metres
- Natural granite setts
