### > Danse Studio – Biarritz

Danse Studio was built in 2015 in Biarritz (south west region of France). This building is dedicated to danse activities.

It is a new building made out of concrete walls. The initial requirement for thermal performance lead to choose an External Insulation Finish System.

Curved EPS was specifically manufactured for round walls. EPS is directly glued on the wall, without any additional anchors. The bonding is strong enough in this windy area.

MAITE basecoat is used on top of EPS. Maite has a very high resin content, wich make it unique on the French market. It is very easy-to- apply, flexible, and long lasting.

The finish is an acrylic coating. Bright white color was used to match the regional style. A masking tape was used to create patterns on the walls.

#### — APPLIED PRODUCT —

- PARISO PSE-M  
*External Insulation Composite System*

#### — ALSO —

- White EPS
- CCP+ Bonding Mortar
- MAITE Basecoat
- REVLANE + Finish

#### — TECHNICAL DETAILS —

- Concrete walls
- Round Walls
