

> Facade Protection and Decoration

> University of Aix-en-Provence

The deterioration of the facades of the University of Aix-en-Provence required a major restoration project that started in June 2015.

18,000 m² of former coating was removed from the concrete substrate. The very damaged concrete needed a major repair done with 739 LANKOCRETE SPECIAL and 761 LANKOSTEEL.

PARINTER RENOVATION was applied on the prepared substrate to allow the application of a lime-rich finish coat named PARLUMIERE FIN.

APPLIED PRODUCTS

- PARINTER RENOVATION

ALSO

- PARLUMIERE FIN
- 739 LANKOCRETE SPECIAL
