

Waterproofing Systems and Technical Solutions

Palacio de los Patos jobsite

Jobsite by foreign investment. Apartments for upper-class, national and international owners.

We were introduced in the jobsites for a technical issue. The jobsite was stopped by a governmental control because their drilling wells had dry off the wells of the neighborhood.

We develop a customized solution with the Chilean team to seal the wells and start back the jobsite.

Because any company in the market could give the solution we win a lot of awareness and we could introduce a lot of other solutions (tile adhesive or technical mortars)
