

Waterproofing Systems and Technical Solutions

The Crest

With an approximate site area of 256,000 sq ft and over 469 units, The Crest comprises of three 23 storey towers and four 5-storey blocks. Located in the tranquil Jervois precinct, the leasehold site at Prince Charles Crescent fronts the good class bungalows of the Chatsworth and Bishopsgate estates.

Using a new construction method of using hollow core precast panels instead of the traditional method of bricks and blocks, this new construction method reduces construction time and labour on site while increasing productivity and cost saving for contractors.
